SKILLS

Languages

TypeScript, JavaScript, Python, Go, R, C++, PHP, SQL, Bash

Backend

Node.js, NestJS, Express.js, FastAPI, Falcon, REST APIs

Frontend

Next.js, Vue.js, Hugo, HTML, CSS

Databases

PostgreSQL, MySQL, TypeORM

Tools & Infrastructure

Linux, Docker, Git, GitHub, Grafana

Other

JWT/RBAC, SendGrid, OpenCV, Claude Code

EDUCATION

AMA Computer College Cabanatuan

Bachelor of Science in Computer Engineering
2020 – 2024

Relevant coursework: Web Application Development

CERTIFICATIONS

CCNA – Introduction to Networks

credly.com/badges/127bdddb-8eef-4b75-a680-ff9a851af286

Network Security

credly.com/badges/77582a95-d857-4e8e-8a5f-bed76a4b32ff

EXPERIENCE

Full-Stack Developer

July 2025 – Present

Zato Novo Inc. (Remote)

Position ending due to company closure in November 2026

- Developed and integrated **backend services and REST APIs** in **R** and **Python (Falcon)** supporting **ECMWF weather forecast extraction**, data processing, and device management workflows.
- Built **backend orchestration** for forecast extraction and backfilling, covering service health checks, API execution, **job tracking**, and **VM lifecycle management**.
- Implemented **historical forecast backtesting** workflows spanning data processing, job execution, **database operations**, and device provisioning.
- Automated operational workflows with **Bash** across **Docker**-based services, including VM start/stop control and programmatic creation of **Grafana** dashboards and alerts.
- Implemented **monitoring and alerting** workflows using Grafana and cloud logging to support **production troubleshooting**.
- Developed the **frontend** for a **City University of New York (CUNY)** client website using **Hugo**, an energy tool lending platform, implementing website layouts and components based on project requirements.

Web Developer

October 2024 – July 2025

81 Property Management Inc. (Makati)

- Developed a centralized **attendance system** using **FastAPI**, **Vanilla PHP**, and **MySQL**, with automated device data synchronization, voucher management, overwrite handling, and **secure API endpoints**.
- Built an **inventory management system** using **Express.js** and **Vue.js** for IT and facility asset tracking, allocation, usage, and status.
- Developed backend functionality for a real estate affiliate marketing property portal using **Vue.js**, **FastAPI**, and **PostgreSQL**, building **APIs** and data-processing workflows.

Freelance Full-Stack Developer

2023 – Present

- Collaborated directly with clients to translate requirements into delivered, working software.

Hotel Booking & Reviews Platform

July – August 2026

NestJS, Next.js, TypeScript, TypeORM, PostgreSQL, Docker, Claude Code

- Built the backend for a hotel booking and reviews platform in **NestJS** and **TypeScript**, covering reservations, guest management, reviews, and a **draft-to-publish content workflow**.
- Designed the **PostgreSQL schema** and **business logic** behind guests, bookings, and reviews, and integrated **payment gateway** processing into the reservation flow.
- Hardened reservation handling by tracing and fixing an **overbooking flaw** in the update path, and by validating **database migrations against production** before release to catch schema drift early.
- Restructured domain code into properly scoped **modules** and built a reusable **SendGrid** email service for transactional notifications.
- Used **Claude Code** throughout for implementation, debugging, refactoring, and code analysis.

Image Culling & Sorting Tool

Python, OpenCV, dlib, YOLOv3, NumPy

- Built a **Python** command-line tool that automatically sorts large image sets into good, rejected, duplicate, and flagged folders, deriving **blur**, **exposure**, and **noise thresholds** from a user-supplied reference image.
- Implemented **closed-eye detection** using **dlib** facial landmarks and eye-aspect-ratio scoring, **near-duplicate detection** via perceptual hashing, and subject-focus validation combining **OpenCV** saliency mapping with **YOLOv3** object detection.
